

Welcome to AutoZoom!

About

This application is a small tool to schedule and connect to your Zoom lectures. If this is your first time using the app, it will ask you for a license key on the next window. You'll find this key on the page where you downloaded the app.

Usage

Adding classes: Things should be pretty self-explanatory, but for the app to work, you'll enter a class name (optional), the Zoom URL (required), starting and ending times, and what days of the week you'd like to connect to the lecture. You can add up to 7 classes.

Removing classes: Just click the remove button and the current class selected will disappear! If you want to clear out all scheduled lectures, simply remove all classes from the application.

1. AutoZoom only works with Firefox or Chrome as your default browser. If you've never opened a Zoom link before, you'll need to click a Zoom link first. It will take you to your internet browser where you can check Always open this type of link with Zoom. After that, everything will run fine!
2. For this application to run properly, you need to disable the computer from asking you for a password when it wakes up. This can be done in **System Preferences > Security & Privacy > General** and unchecking **Require password ## after sleep or screen saver begins**. If you're on a laptop that isn't plugged into an external monitor, you'll need to leave your computer open so that it can wake up properly.
3. Any permissions that the application asks for when you use it, you need to accept. A breakdown of permissions is as follows:
 - Accessing the Applications folder: This permission allows AutoZoom to access the files included with it that it needs to run.
 - Administer your computer: This permission is critical to the functionality of AutoZoom. Without it, the application won't be able to schedule connections.
4. Make sure your computer doesn't go to sleep before 5 minutes of inactivity. There is a 5 minute buffer between the time your computer wakes up and when it connects to the class. This is to ensure everything is up and running, you're connected to the internet, etc.
